

CANCER GENETICS FAST FACTS

EVERYONE who carries a cancer gene mutation has a **50%** chance of passing it on to the **NEXT GENERATION**.

Multi-gene panel testing can **IDENTIFY MUTATIONS** in genes other than BRCA1 or BRCA2, such as ATM, CHEK2, Lynch or PALB2, that may predispose you to a variety of cancers including male breast, colon, pancreatic, prostate, uterine and melanoma.

If the results of genetic testing in a family are negative, it is **STILL POSSIBLE** that the cancer in the family is **INHERITED**, resulting from genetic mutations that we do not yet know how to identify.

1 IN 40

Ashkenazi Jews, **BOTH MEN AND WOMEN**, carries a BRCA1 or BRCA2 gene mutation.

Individuals who carry genetic mutations should **HAVE THE OPPORTUNITY** to make choices about high risk screening and risk-reducing surgery and treatment that can **SAVE THEIR LIFE**.

If you have any personal questions about your family cancer history or genetics, please contact our genetic counselor at genetics@sharsheret.org.
